

MuchoUchuu real-space diffusion containment scaling

The real-space containment scale follows $\ell_{0.5}(t) = A_{0.5}\sqrt{t}$ over the fitted interval.

(a) MuchoUchuu physical diffusion-length calibration

(b) Compensated $\sqrt{t}$ scaling

Independent fit to the 50% containment scale: $A_{0.5} = 6.449188 h^{-1}\text{Mpc step}^{-1/2}$; fractional RMS about the fitted $\sqrt{t}$ relation = 3.057%.
